- 3. How to take borderline product CANNABIS BIO*
- 4. Possible side effects*
- 5. Storage and shelf life of borderline product CANNABIS BIO*
- 6. More information*

1. What is borderline product CANNABIS BIO and what is used for

CANNABIS BIO is oil solution, spray for oral use, that contains oily extract from hemp plant (cannabis) and hemp seed oil. The oil solution is with proven absence of pesticides and herbicides in the product.

The oily extract is produced with extraction from hemp plant (cannabis), which is carried out at low temperature without the use of organic solvents which provides the highest quality of the oil extract. The extract contains cannabinoids, primarily CBD (Cannabidiol), as well as CBN (Cannabinol), CBG (Cannabigerol) and other similar compounds.

Cannabinoids bind to the CB1 and CB2 receptors of the endocannabinoid system in the human body and may have immunomodulating effect (improving the immune system) and other positive effects for the general health condition.

Hemp seed oil in CANNABIS BIO is one of the few natural herbal oils, suitable for everyday use in nutrition that contains essential omega-6 fatty acids (linoleic - LA and gamma-linoleic acid - GLA) and omega-3 fatty acids (alpha linoleic - ALA and stearidonic acid - SDA) in a ratio 3:1. On other side, maintaining the balance of this ratio in nutrition is important for prevention of occurrence of inflammatory, cardiovascular, skin diseases and other health conditions.

This oil contains all the essential amino acids in a balanced ratio, also contains minerals, oligoelements, vitamins, as well as phytosterols and tocopherols.

Because of that, CANNABIS BIO product from oily extract from hemp plant and hemp seed oil, may contain terpenes, flavonoids, glycosides, pigments, alkanes, nitrogen compounds, essential amino acids in a balanced ratio, magnesium, manganese, iron, zinc, potassium, vitamins (A, B1, B2, B3, B5, B6, C, D, E, F) and significant amounts of phytosterols and tocopherols (from Vitamin E complex), that are important in cells construction and normal metabolic and physiological processes in human body.

The complex compounds of the oily extract and hemp seed oil in CANNABIS BIO spray have “entourage” effect, i.e. show synergistic and mutual complementary action, which provides oil solution with favorable effect on the function on many systems in human body and general health condition.

CANNABIS BIO contains THC (9-delta tetrahydrocannabinol) in amount less than 0,2%.

The strawberry aroma in CANNABIS BIO improves taste and odor of the oil solution and provides better tolerance among those persons who are intolerant to the natural taste and odor originating from hemp plant (cannabis).

CANNABIS BIO oil solution in a form of spray provides simple and quick use.

What is this borderline product CANNABIS BIO used for

CANNABIS BIO can help the body in conditions with malignant diseases, multiple sclerosis, HIV and epileptic syndromes in childhood.
